

Spring 2024

Dear Skidmore College Summer Program Participants and Parents,

This memo is to clarify available services and to stress the importance and timeliness of completing the enclosed Health Form.

It is requested that the enclosed Health Form be completely and accurately filled out and submitted to your Program Director by June 1, 2024. If you have not filled out and returned these forms completely, you will not be able to participate in this program.

Immunization information is requested for the public health and safety of the campus and the participants. Without documentation of immunity, participants may be asked to leave campus in the event of an outbreak. (As of 2/15/24, New York State Dept of Health issued a health advisory reporting measles cases in NY, New Jersey and Pennsylvania as well as other states in the country).

New York State law requires meningococcal meningitis vaccination or documentation of refusal of the vaccine, for all summer program participants. Please review the enclosed information carefully, answer all questions on the forms, and obtain all required vaccinations.

If your student is under the age of 18 while participating in a Skidmore College-sponsored program, it is our policy to secure your consent for first aid, triage, and emergency care. Whenever possible, the program will obtain specific permission from you, before referral. Therefore, parents of participants under 18 should be sure to include all possible telephone/cell numbers on the Health Form and complete the authorization at the bottom of page one.

For illness/injury that involves care beyond basic first aid, participants will be referred to nearby community resources, either Urgent Care or the Emergency Department. There are several urgent care clinics less than two miles from campus and the Saratoga Hospital Emergency Department is 1.3 miles away. Campus Safety can assist with transportation to medical care in non-emergency situations. For any type of emergency care needs, we will call an ambulance for transport.

While we are able to accompany program participants for urgent and emergency care needs, we do not have staffing to bring participants to routine medical care appointments. If your student has ongoing medical concerns that require medication, regular treatment and/or support (e.g. physical therapy, psychotherapy or medication management) please make sure you discuss their participation in this program, and time away from home, with their current provider, so that you can develop a plan ahead of time for ongoing support during the program.

Frequently Asked Questions and Answers About Meningococcal Meningitis

What is meningococcal disease?

Meningococcal disease is caused by bacteria calleidseria meningitidist can lead to a serious blood infection called meningococcal septicemia. When the linings of the brain and spinal cord become infected, it is called meningococcal meningitis. T disease strikes quickly and can have serious complications, including death.

Anyone can get meningococcal disease. Some people are at higher risk. This disease occurs more often in people who are:

- x Teenagers or young adults
- x Infants younger than one (1) year of age
- x Living in crowded settings, such as college dormitories or military barracks
- x Traveling to areas outside of the United States, such as theihngies belt" in Africa
- x Living with a damaged spleen or no spleen or have sickle cell disease
- x Living with HIV
- x Being treated with the medication Soliris® or Ultomiris[™], or those who have complement component deficiency (an inherited immune disorder)
- x Exposeduring an outbreak
- x Working with meningococcal bacteria in a laboratory
- x Recently infected with an upper respiratory virus
- x Smokers

What are the symptoms?

Symptoms appear suddenlyusually three (3) to four (4) days after a person is infected. It can take up to ten (10) days to develop symptoms. Symptoms of meningococcal meningitis may include:

- x Fever
- x Headache
- x Stiff neck
- x Nausea
- x Vomiting
- x Photophobia (eyes being more sensitive to light)
- x Altered mental status (confusion)

Newborns and babies may not have the classic symptoms listed above, or it may be difficult to notice those symptoms in babies. Instead, babies may be slow or inactive, irritable, vomiting, feeding poorly, or have a bulging anterior fontanelle (thetsoff the skull). In young children, doctors may also look at the child's reflexes for signs of meningitis. Symptoms of meningococcal septicemia may include:

- x Fever and chills
- x Fatigue (feeling tired)
- x Vomiting
- x Cold hands and feet
- x Severe aches or pains in the muscles, joints, chest, or abdomen (belly)
- x Rapid breathing
- x Diarrhea
- x In the later stages, a dark purple rash

How is meningococcal disease spread?

important that teens receive the booster dose at age 16 years in order to protect them through the years when they are at greatest risk of meningococcal disease.

x Teens and young adslcan also be vaccinated against the "B" strain, also known as MenB vaccine. Talk to your healthcare provider about whether they recommend vaccine against the "B" strain.

Who should not be vaccinated?

Some people should avoid or delay the meningococcatine:

- x Tell your doctor if you have any severe allergies. Anyone who has ever had a severe allergic reaction to a previous dose o meningococcal vaccine should not get another dose of the vaccine.
- x Anyone who has a severe allergy to any component in the vaccine should not get the vaccine.
- x Anyone who is moderately or severely ill at the time the shot is scheduled should wait until they are better. People with a mild illness can usually get vaccinated.

What are the meningococcal vaccine requirements for sohattendance?

- x For students entering grades seven (7) through 11: one dose of MenACWY vaccine
- x For students entering grade 12: two (2) doses of MenACWY vaccine
 - o The second dose needs to be given on or after the 16th birthday.
 - o Teens who received their first dose on or after their 16th birthday do not need another dose.
